DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, drawn to a gamut conversion system, classified in class 345, subclass 590.
- II. Claim 21, drawn to a method for converting gamut in a perceptually uniform space, classified in class 358, subclass 520.
- III. Claims 22-32, drawn to color space conversion, classified in class 345, subclass 604.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the invention I does not require the color space conversion for gamut correction. The subcombination has separate utility such as the color space conversion can be used in many color-reproducing systems such as a video display system, a facsimile system, or a printing system.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be completed must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
